RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 92 pages. Original publisher: Washington, DC : U. S. Department of Justice, Office of Justice Programs, National Institute of Justice, 2000 OCLC Number: (OCoLC)45622633 Subject: Criminals -- United States -- Identification. Excerpt: . . . By this time there should be a number of markers available that identify physical traits of the individual contributing the DNA. It should be possible, using this information, to narrow the search for a suspect, with consequent increases in the accuracy and efficiency of operation. 5. Statistical and Population Issues Over the past 10 years, data on allele frequencies for VNTR loci have accumulated in large numbers for population groups throughout the world and in the United States. There are far too many genotypes in the population for all genotypic frequencies to be included in the database. Hence it is necessary to record allele frequencies and arrive at profile frequencies by use of population genetics theory. In a large, randomly mating population, the frequency of a profile is given by the product rule, which states that the frequency of a multilocus genotype is given by the product of the allele frequencies, with a...

Reviews

This book may be really worth a read through, and far better than other. it was actually writtern extremely completely and valuable. I am just very easily will get a satisfaction of looking at a published ebook.

-- **Lillie Toy**

It is easy in read through easier to fully grasp. it had been writtern very completely and useful. I am pleased to let you know that here is the greatest book we have read during my personal life and could be he very best book for possibly.
